CodesFix CRM vs ClickUp Pro

An honest, agency-first comparison for small web dev / design / SEO shops

Read this first: this document does not pretend ClickUp is bad at project management. It isn't. ClickUp is an excellent *task* tool. The question this sheet answers is narrower and more important:

> ***Does the tool tell a 5–25 person agency what it actually earned, who is actually free, and who is about to burn out?***

1. Feature-by-feature comparison

Legend: ? CodesFix CRM (Better) • ?? ClickUp Pro (Better) • ?? Both Good • ?? Missing / Gaps

#	Feature	ClickUp Pro	CodesFix CRM	Verdict
1	**Project Management**	Multiple views (List, Board, Gantt, Timeline, Calendar, Table, Workload). Excellent flexibility.	Projects carry agency context: source (Upwork / Fiverr / Referral / Direct), category, platform + stack taxonomy, estimated hours vs tracked minutes, deadline, risk status, assigned PM + suggested developer, internal notes. Fewer view types.	?? ClickUp Pro (Better)
2	**Time Tracking**	Native timer + manual entries, billable / non-billable flags, time estimates.	Timer (PORTAL_TIMER) + manual + import, recorded per person ? task ? project in seconds. Voided entries keep a reason + who voided them. Idempotency keys prevent double-counting.	?? Both Good
3	**Capacity / Workload**	Workload view showing assigned hours per person over time.	Real capacity engine: per-user working schedules, time off and holidays subtracted before math runs, configurable thresholds (Available =70%, Normal =90%, Near Capacity 100%, Overloaded >100%).	? CodesFix CRM (Better)
4	**HR (attendance / leave / schedules)**	None. HR is out of scope.	Working schedules (per day, per timezone, effective-dated), time-off requests with PENDING ? APPROVED/REJECTED workflow, requester+approver+reviewer recorded, holiday calendar, FT/PT/contractor types.	? CodesFix CRM (Better)
5	**Expense Management**	Not included.	Not included.	?? Missing / Gaps
6	**Revenue / Profitability**	Can bill hourly rates against billable time on higher tiers. No cost/salary/margin model.	Estimated hours per project, estimated vs tracked minutes per task, assigned hours per assignment, employment type. Inputs exist for cost/margin rollups.	? CodesFix CRM (Better)

7	**Reporting / Charts & Graphs**	Dashboards ✅ strongest visualization in this comparison.	Time-tracking dashboard + workload summaries. No chart builder yet.	?? ClickUp Pro (Better)
8	**Client Portal**	Yes ✅ client-facing portal (paid).	Not shipped.	?? ClickUp Pro (Better)
9	**Billing / Invoices**	Higher tiers can generate invoices from billable time at hourly rates.	Not shipped.	?? ClickUp Pro (Better)
10	**Team Management**	Guests, groups, org structure, seat management.	Employment type, specialty (WordPress/SEO/Figma/AI Automation/PM), skills + skill-request approval workflow, profile/account status, notifications, web push, presence.	?? Both Good
11	**Roles & Permissions**	Deeply granular ✅ many custom roles, per-field permissions.	Clean roles (Admin/PM/Developer), access separate from specialty, full audit trail (actor/action/entity/old/new/IP).	?? Both Good
12	**File Sharing / Attachments**	Full file storage on attachments & Docs.	Not shipped (credential vault exists but not general file store).	?? ClickUp Pro (Better)
13	**Comments / Mentions**	Threaded comments, @mentions.	In-app + web push notifications only, no comment threads.	?? ClickUp Pro (Better)
14	**Automations**	Extensive rule builder.	Not shipped.	?? ClickUp Pro (Better)
15	**Forms / Intake**	Native Forms + responses feeding tasks.	Not shipped.	?? ClickUp Pro (Better)
16	**Docs / Knowledge Base**	Docs, Wiki, project briefs ✅ strong.	Scope summaries, internal notes only.	?? ClickUp Pro (Better)
17	**Integrations**	200+ integrations (Git, Figma, Slack, Drive, etc.).	Self-contained (ClickUp sync removed).	?? ClickUp

				Pro (Better)
18	**Pricing Model**	Per user/month, tiers gate features. Guests billed.	Fixed/license-based model, self-hosted. No per-seat multiplier for internal roles.	? CodesFix CRM (Better)
19	**Scalability**	Elastic cloud, global scale.	Single-tenant self-hosted PostgreSQL (ideal for small agencies).	?? Both Good
20	**Data Ownership**	Vendor-hosted.	Your PostgreSQL database full SQL access, backups you own, no lock-in.	? CodesFix CRM (Better)
21	**Security / Encryption**	Encryption in transit/at rest, SOC 2/ISO 27001 on higher tiers.	AES-GCM field-level encryption on credentials, full audit trail with attribution.	? CodesFix CRM (Better)

2. Where CodesFix CRM wins (for small agencies)

- **Track billable hours per developer per project** ? see true profitability (not just closed tasks)
- **Avoid paying per-seat for internal-only roles** (accounts/HR/ops don't inflate your license)
- **Own your HR + attendance + leave data** in your database, not buried in task custom fields
- **See utilization % to prevent burnout** capacity computed with approved leave + holidays
- **Estimated vs tracked on every task** ? catch scope creep while the relationship is healthy
- **Client credentials encrypted + audited** (AES-GCM) with full change history
- **Know where projects come from** (source tracked per project)
- **Own your data outright** PostgreSQL you control, backups you own, no lock-in

3. Where ClickUp Pro still wins

Visual task views, dashboards/charts, comments/@mentions, Docs, automations, forms, attachments, integrations, granular permissions, and native invoicing from billable time.

4. Gaps (honest)

Gap	Notes
Expense Management	Not in either
Invoices/Payments	ClickUp higher tiers; CodesFix not yet
Client Portal	ClickUp yes; CodesFix not yet
Charts/Dashboards UI	ClickUp yes; CodesFix summary only
Comments/Files/Docs/Forms/Automations	ClickUp yes; CodesFix not yet
Revenue/Margin Rollup Screen	Inputs exist in CodesFix; view not shipped
Attendance Clock-in/out + Payroll	Not in either (HR-lite exists in CodesFix)

5. Why CodesFix CRM is built for small agencies

1. **Models an agency, not a task list** – source, category, stack, client, PM, suggested dev, risk, estimated vs tracked hours.
2. **Time captured in seconds** with timer+manual, tied to person?task?project, with immutable void trail.
3. **Capacity computed, not guessed** – working schedules + approved leave + holidays = real utilization.
4. **Skills and roles separated** – access by role, capability by specialty/skills.
5. **Credentials treated as liability** – AES-GCM encrypted vault with audit trail (not shared docs).
6. **You own the whole record** – timesheets, leave, skills, credentials, audit logs in your PostgreSQL DB.

6. Bottom line

ClickUp Pro is a strong project/task tool. It is not a delivery + people + money system.

Small web/design/SEO agencies lose money when hours go untracked, projects go 3x over estimate, or a dev runs at 130% for weeks. CodesFix CRM puts tracked time, live capacity, and your own data in one system – so delivery, HR-lite, and the inputs for profitability finally sit together.

- **If organizing tasks is your only goal** ? ClickUp Pro
- **If knowing whether your agency is profitable, healthy, and in control of its data is your goal** ? **CodesFix CRM**
